Art Unit: 2653

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-65, 94-100, drawn to an article, classified in class 369, subclass 13.08.
 - II. Claims 66-80, drawn to a system, classified in class 360, subclass 55.
 - III. Claims 81-84, drawn to a method, classified in class 204, subclass 192.
 - IV. Claims 85-93, drawn to a method of using, classified in class 369, subclass 13.02.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and I, II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the article (a tape) can be made by another and materially different process that does not require the step of sputtering, for instance.
3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system could use magnetic tape. The combination has separate utility such in a system using an optical tape that does not include a magneto-optical tape, for instance.

4. Inventions I, II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of use (writing) can use an optical tape that does not includes a magneto-optical tape, for instance.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angel A Castro whose telephone number is 703-308-8435. The examiner can normally be reached on Monday through Thursday, 8 AM to 6 PM.
